

AMENDMENTS TO THE SPECIFICATION

Please amend first full paragraph appearing on page 6 of the specification as follows:

Fig. 3 shows yet another variant of a simple module 1b. Here, the output of a sensor 2b is supplied via signal line 12 to one input of a comparator 30. The comparator 30 compares the sensor signal 12 with a signal value input via signal line 11 and outputs an actuator control signal 13 accordingly to the actuator 3b. The signal value input 11 may originate, e.g., from the center unit 5, or, alternatively, may be a signal state originating within the mixed module 1b.
